## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 9-17 and 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Parthasarathy et al. (5,913,192).

As to claim 11, Parthasarathy teaches a method speaker identification and verification, comprising the steps of:

Accepting input speech (21);

Generating N-best candidates (22; Col.5, lines 3-30);

placing the candidates for verification ; and

verifying the output is conclusive (26, 28; Col.5, lines 30-60).

As to claims 12, 17 and 19-20, Parthasarathy teaches where the verifying takes statistical values associated with each candidate in the N-best list to verify the output (Col.5, lines 45-60).

As to claims 13 and 14, Parthasarathy teaches where two likelihood statistical value from two models are combined to yield a verification (confidence measure) score (Col.5, lines 45-60).

As to claims 15-16, Parthasarathy teaches a verification threshold to compare it with the score and make decision based on the result (Col.5, lines 55-57), including inherently prompting the speaker to speak again.

Claims 1-7, 9-10 and 21 are analogous to the claims above and are rejected by Parthasarathy for the foregoing reasons.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parthasarathy as applied to the claims above, and further in view of Burges (6,411,930).

As to claims 8 and 18, Parthasarathy doesn't teach using gaussian densities. Burges, however, teaches a method for identifying a speaker using a weighted sum of gaussian densities (abstract; Col.3, lines 5-25). It would have been obvious to one of ordinary skill in the art to use gaussian model in Parthasarathy teaching, in view of Burges, as an alternative way of calculating the scores.
